Honeywell

Honeywell invents and manufactures technologies to address some of the world's toughest challenges initiated by revolutionary macro trends in science, technology and society. A Fortune 100 company, we create solutions to improve the quality of life of people around the globe.

Honeywell Airports Business [1] uses GIPSY[®] to design airfield and technical visualization for Airfield Ground Lighting (AGL) control & monitoring system (CMS). The tool is used to design operational representation of an airfield along with technical representation of CMS equipment. It makes the basis for tower HMI which offers dynamic representation of current airport situation including Advanced-Surface Movement Guidance and Control (A-SMGCS) as well as airfield lighting control.

To find out more about the engagement of Honeywell within Airports business visit its website <http://www.honeywellairports.com> [1] or go in contact with its Airports Team [2]. View also its end-to-end solutions [3].
